NGSS Science & Engineering Practices Grades 6-8 1 = unable to perform; 2 = perform with assistance; 3 = proficient; 4 = exemplary

Practice / Indicator	1	2	3	4	NOTES							
Asking questions and defining problems in grades 6–8 builds from grades K–5 experiences and progresses to formulating and refining empirically testable questions and explanatory models												
Ask questions that arise from phenomena, models, or unexpected												
results.												
Ask questions to clarify or identify the premise(s) of an argument.												
Tisk questions to enamy of identify the premise(s) of an argument.												
Ask questions to determine relationships between independent and												
dependent variables.												
•												
Ask questions that challenge the interpretation of a data set.												
Ask questions to refine a model, an explanation, or an engineering												
problem												
Modeling in 6–8 builds on K–5 and progresses to developing, using, and revising models to explain, explore, and predict												
more abstract phenomena and design systems.												
Use and/or construct models to predict, explain, and/or collect data to												
test ideas about phenomena in natural or designed systems, including												
those representing inputs and outputs.												
those representing inputs and outputs.												
Pose models to describe mechanisms at unobservable scales.												
Modify models-based on their limitations-to increase detail or clarity,												
or to explore what will happen if a component is changed.												
Use and construct models of simple systems with uncertain and less												
predictable factors.												
	t sol	uti	ons	to	problems in 6–8 builds on K–5 experiences							
Planning and carrying out investigations to answer questions or tes												
Planning and carrying out investigations to answer questions or tes and progresses to include investigations that use multiple variables												
Planning and carrying out investigations to answer questions or tes and progresses to include investigations that use multiple variables solutions.												
Planning and carrying out investigations to answer questions or tes and progresses to include investigations that use multiple variables solutions. Plan and carry out investigations individually and collaboratively,												
Planning and carrying out investigations to answer questions or tes and progresses to include investigations that use multiple variables solutions.												
Planning and carrying out investigations to answer questions or tes and progresses to include investigations that use multiple variables solutions. Plan and carry out investigations individually and collaboratively, identifying independent and dependent variables and controls.

NGSS Science & Engineering Practices Grades 6-8 1 = unable to perform; 2 = perform with assistance; 3 = proficient; 4 = exemplary

i unable to perform, 2 perform with assis		cc ,	<u> </u>	P	metent, 4	enem	piary		
Use graphical displays (e.g., maps) of large data sets to identify									
temporal and spatial relationships.									
Mathematical and computational thinking at the 6–8 level builds on	K-	-5 a	nd	pro	ogresses t	o identi	fving na	atterns in la	rge
data sets and using mathematical concepts to support explanations							-j8 P		-8-
Use digital tools (e.g., computers) to analyze very large data sets for	linu	ar	gui						
patterns and trends.									
Use mathematical concepts such as ratios, averages, basic probability,									
and simple functions, including linear relationships, to analyze data.									
Use mathematical arguments to justify scientific conclusions and									
design solutions.									
Constructing explanations and designing solutions in 6-8 builds on	K-4	5 ex	kpei	rier	ces and p	rogress	ses to in	clude constr	ructing
explanations and designing solutions supported by multiple sources									
principles and theories								0,	
Construct explanations for either qualitative or quantitative									
relationships between variables.									
Apply scientific reasoning to show why the data are adequate for the									
explanation or conclusion.									
Base explanations on evidence and the assumption that natural laws									
operate today as they did in the past and will continue to do so in the									
future.									
Undertake design projects, engaging in the design cycle, to construct									
and implement a solution that meets specific design criteria and									
constraints.									
Apply scientific knowledge to explain real-world examples or events									
and solve design problems.									
Construct explanations from models or representations.									
Engaging in argument from evidence in 6–8 builds from K–5 experi									g
argument that supports or refutes claims for either explanations or	solı	utio	ons	abo	out the na	tural a	nd desig	gned world.	
Use oral and written arguments supported by empirical evidence and									
reasoning to support or refute an argument for a phenomenon or a									
solution to a problem.									
Evaluate competing design solutions based on jointly developed and									
agreed-upon design criteria.									
Compare two arguments from evidence to identify which is better by									
identifying flaws in logic or methods									
Obtaining, evaluating, and communicating information in 6-8 build	ls o	n K	-5	and	l progress	ses to e	valuatin	g the merit	and
validity of ideas and methods.									
Communicate understanding of scientific information that is presented									
in different formats (e.g., verbally, graphically, textually,									
mathematically).									
Generate and communicate ideas using scientific language and									
reasoning.									
Gather, read, and explain information from appropriate sources and									
evaluate the credibility of the publication, authors, possible bias of the									
source, and methods used.									
Read critically using scientific knowledge and reasoning to evaluate									
data, hypotheses, conclusions, and competing information.
